Interlube's **White Cote --- AW +1** products are food grade multipurpose lubricants with exceptional oxidation stability. Their uses include today's modern high pressure, high speed hydraulic systems and many general purpose lubricant applications. They are formulated with extra high levels of oxidation inhibitors, antiwear agents, mild EP agents, and rust inhibitors which pass the tough Vickers 2000 psi pump wear test while still maintaining their food grade rating. The oxidation stability and antiwear performance of these food grade lubricants is superior to most non-food grade lubricants on the market today.

These oils have many applications other than as premium quality antiwear hydraulic oils including those calling for non detergent oils, bearing lubricants, non-EP type gear lubricants, electric motor lubricants, spindle lubricants, chain lubricants, and circulating system lubricants. They offer the following benefits over most other food grade lubricants:

**Reduced Friction - Lowers Energy Input**  
**Reduced Wear - Longer Equipment Life**  
**Lower Downtime - More Production Time**  
**Reduced Maintenance - Increased Production**  
**Multipurpose Products - Reduced Inventory**  
**Increased Performance - Lowers Costs**  
**Enhanced Oxidation Stability**

**The White Cote --- AW +1** products are all USDA H1 rated (lubricants approved for incidental contact with food) and are suitable for applications where there might be the possibility of incidental contact with food or its packaging materials.
