CINNGRIND 4

Cinngrind 4 is a special high performance, synthetic hydrocarbon based fluid designed for high speed grinding operations. This synthetic based fluid has better oxidative and thermal stability than conventional mineral oil based grinding fluids. This results in longer life and in maintaining the grinding fluid in like new condition. Its superior heat transfer performance results in cooler running and extending the life of the grinding fluid. It also has a higher flash point and much lower volatility than conventional fluids. This results in a safer, cleaner, and more pleasant operating environment.

Typical Properties

Appearance	Clear, water white
Viscosity, cSt @ 100°C	1.7
Flash Point, COC ° F	315
API Gravity	46
Specific Gravity	0.80
Pounds per US Gallon	6.66
