RUST PREVENTATIVE 208

Rust Preventative 208 is a completely synthetic, water-soluble, biodegradable, multipurpose fluid with good short term rust protection. It is designed primarily as a rust protective agent but is also a good cleaner for lightly soiled parts. It is formulated for brush, spray, or dip applications and is designed to prevent buildup of residues which normally interfere with system operations. Its water-based system is a safe and economical solution to the occupational and environmental problems posed by solvent based rust preventatives.

This product finds many uses where the combination of a cleaner - rust protective agent for parts and equipment is required. It is hard water stable and works well at high dilution rates with water. It is commonly used to remove machining oils, and residues from freshly machined parts, and/or equipment. Its low foam and very low residue formulation also allow its use for protecting circulating systems which can be run tested and drained without further clean out. Its transparency and this film make it ideal for short term protection of parts in process or between machining and assembly steps.

It is inherently biostable as it does not contain oils, sulfonates, and other necessary and desirable foods for bacteria to thrive on. This Anon-food, starvation benefit@ coupled with incorporation of materials which prevent spoilage results in very long sump life.

MULTI-FUNCTIONAL PRODUCT BENEFITS

- | | |
|--------------------------|---------------------|
| *Good Rust Protection | *Light Duty Cleaner |
| *Safe Water-based System | *Synthetic-No Oil |
| *Hard Water Stable | *Bistable Formula |
| *High Dilutions | *Economical |
| *Transparent Low Buildup | *Biodegradable |
| *East Application | *Low Foam |

USE INSTRUCTIONS: Use at 20:1 to 50:1 mix ratios of water to product. This product can be applied by spray, brush or dip. Use levels will vary relative to the degree of protection required.

TYPICAL PROPERTIES

Color	Clear Blue
Specific Gravity	1.05
1% Foam Test	Very Low
1% pH	<9.5

Interlube also offers Rust Preventative 216. It is a product similar to the Rust Preventative 208 but can be used at about two times the dilution ratios. Please contact your Interlube sales representative for more information on this or other products.
